

Aether Labs

Whitepaper V1.0

Smart Autonomy for the Decentralized Future

Project Name: Aether Labs

Token: \$AETH

Version: Whitepaper V1.0

01

Project Overview Project Aether

Aether Labs is a next-generation Web3 innovation lab dedicated to building intelligent, scalable, and user-centric decentralized finance infrastructure. Our flagship product, **Aether Wallet**, is designed to redefine how users interact with digital assets by integrating artificial intelligence, on-chain asset management, and seamless cross-chain operability.

Aether Labs is not merely a tech development studio — we are creating a new entry point for the Web3 world by combining protocol, experience, and incentives into one seamless system. We aim to provide users with a secure, intelligent, and frictionless environment for asset interaction, while enabling developers and partners to quickly launch on-chain business gateways.

Our mission: To empower every user with a smarter, safer, and more efficient way to manage their digital wealth.

02

Vision & Mission

In an era of increasing chains, fragmented protocols, and complex tools, real innovation means not adding yet another protocol — it means simplifying complexity through intelligent aggregation, automation, and intuitive experiences. Aether is not built solely for tech-savvy users, but for anyone who wants true control over their digital destiny.

Our core beliefs:

- Wallets are not just storage tools — they are intelligent gateways to the Web3 world;
- Users should not have to manually configure strategies — they should have evolving AI assistants;
- Every on-chain interaction should generate feedback or value, not just fees;
- Privacy is a right — control must always remain in the user's hands.

Aether Labs is turning these beliefs into reality.

03

Product Stack Ecosystem Matrix & Core Applications

3.1 Core Product: Aether Wallet

Aether Wallet is a multi-chain Web3 wallet designed for superior user experience, automation, and security. It includes:

- **Non-custodial security:** Users retain full control of their assets, with local private key storage;
- **Zero-tracking, encrypted privacy:** No user data is collected. Secure local backup is supported;
- **Built-in AI assistant:** Aether Agent helps with portfolio management, strategy execution, and live insights;
- **One-tap chain addition:** Add any EVM-compatible chain manually or via automatic detection;
- **Cross-chain transactions:** Native integration with bridge protocols for seamless asset transfers;
- **Behavior mining system:** Everyday interactions earn \$AETH rewards through our Tap2Earn engine.

Initial supported chains: Ethereum, BNB Chain, Polygon, Arbitrum. Future support will be community-governed.

3.2 Product Ecosystem

Product	Key Features	Status
Aether Wallet	Mobile wallet (Android/iOS)	Android in beta, iOS launching soon
Aether Web App	Browser wallet UI + DApp bridge	2025 Q3
Browser Plugin	Chrome extension with instant wallet access	2025 Q4
AI Strategy Platform	Configurable strategy engine for users and institutions	In planning
Aether Explorer	Transparency dashboard for user behavior and rewards	In development

04

AI Module Aether Agent

Aether Agent is the embedded AI engine powering the intelligent layer of Aether Wallet. It fuses blockchain analytics, model training, and execution automation to create the first truly "automated Web3" system:

- **Personalized portfolio advice:** Asset allocation suggestions based on behavioral and on-chain analysis;
- **Arbitrage and rebalancing automation:** Multi-protocol yield and rotation strategies supported;
- **Predictive behavior and risk control:** AI models detect volatility and offer action prompts;
- **Custom task scripts:** Users can automate triggers like "If token X hits \$Y, auto-sell Z%".

The more you use Aether Wallet, the smarter Aether Agent becomes — evolving with each user.

05

Incentive System Tap2Earn = Behavior-as-Mining

We introduce **Tap2Earn**, a behavioral incentive system that converts meaningful on-chain activity into transparent, claimable rewards.

Eligible actions include:

- Daily app logins
- Connecting to a new DApp
- Completing a swap
- Adding new chains or importing wallets
- Participating in governance proposals

User points are aggregated daily and automatically converted into \$AETH. All records are viewable on-chain via Aether Explorer, ensuring fairness and transparency.

06

Tokenomics \$AETH Token System

6.1 Basic Info

Token Name: Aether Token

Symbol: \$AETH

Network: Ethereum (ERC-20)

Total Supply: 10,000,000,000 AETH

6.2 Allocation Breakdown

Category	Core Team	Advisors & Partners	Initial Market & Marketing	Tap2Earn Rewards	Liquidity & Listings	Seed + Public Presale	Protocol Treasury	Reserve & Ecosystem Fund
Allocation	8%	5%	15%	0%	10%	22%	20%	10%

All locked tokens follow linear vesting schedules (max 36 months) to ensure stability.

6.3 Use Cases

- Tap2Earn reward distribution
- Unlocking premium features (AI models, auto-trading)
- Fee discounts on swaps and bridge transactions
- DAO governance voting (roadmap, supported chains, incentives)
- Revenue-sharing and reward pool participation
- Future staking, node incentives, and DAO contribution programs

07

Business Model & Revenue Streams

Aether's monetization strategy is based on diversified service value:

- 1 **Transaction fees:** All swaps and bridges charge a 0.5% platform fee;
- 2 **AI feature subscriptions:** Premium tools (arbitrage, model strategies) are unlocked via \$AETH;
- 3 **In-wallet promotions & ads:** DApp partners can pay for exposure and placement;
- 4 **Protocol access fees:** Projects pay integration/setup fees to join the ecosystem;
- 5 **Developer APIs:** White-label plugins and strategy APIs provide recurring B2B income.

Portions of revenue will be used for \$AETH buybacks or DAO-led reward distributions.

08

Development Roadmap

Timeline	Milestone
2025 Q3	Android beta release, seed/public sale begins
2025 Q4	iOS TestFlight launch, token IDO
2026 Q1	Aether Wallet public beta, ecosystem opens
2026 Q2	Cross-chain swaps go live, 100K+ users
2026 Q3	AI Strategy Center launch, DAO governance beta
2026 Q4	Browser plugin released, 100+ DApps integrated

09

Partnerships & Strategic Ecosystem

Aether Labs is forging deep partnerships across oracles, infrastructure, data, and AI sectors:

- Chainlink / Supra / RedStone (oracle integration)
- Moralis / WalletConnect / DappRadar (DApp APIs)
- OpenAI / DeepSeek (AI inference & modeling)
- Multiple DeFi protocols and Launchpads (ongoing integrations)

We will also launch the **Foundry dApp Builder Program** with SDK and wallet-native plugin access for 3rd party developers.

10

Team & Governance

Our core team includes members from Google, Meta, Binance Labs, Avalanche Foundation, and top DeFi protocols, bringing strong technical, product, and governance experience. We champion on-chain governance, self-evolution, and transparency. Our long-term goal is to hand protocol control to a fully community-owned DAO.

Initial DAO framework includes:

- Membership via \$AETH staking
- Quarterly governance proposals & voting rounds
- Treasury execution via signer-based smart contract system
